DETAILED ACTION

1. The Abstract should have been revised to reflect the claimed apparatus, further, abstract should be in a single paragraph and limit in range of about 50-100 words.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Nomura (5,860,208) in view of Nakano (6,920,687).

Nakano discloses a component mounting apparatus comprising:
a work conveyor-position unit as carrier 24 arranged on a supporting base 20 or 23 for conveying and positioning a work in an X direction; supporting frames 21 arranged in a standing manner on both ends of the supporting base 20 or 23 in a Y direction being orthogonal to the X direction. Nomura do not teach the apparatus that having the configuration where a plurality of Y-axis tables as stages provided between upper ends of the both supporting frames at an appropriate interval; X-axis tables attached to a movable portions of the respective Y- axis tables; and operating heads attached to movable portions-of the X-axis tables for performing operations with respect to the work on the work conveyor-positioning unit. The Nakano discloses that (see Fig. 1, 3 and 7) for the teaching as described above that associates with the X and Y tables

1A versus 1b-1, 1b-2. Therefore, it would have been obvious to one having an ordinary skill in the art at the time of the invention was made to employ the teaching of Nakano onto the invention of Nomura in order to form a desired mounting system, the motivation for the combination can be found at col. 2, of the Nakano reference.

Note: robots 1a-1b are as broadly as readable as the claimed X and Y-axis tables, further, it is noted that the limitation recites: " wherein upper ends of the supporting frames~ are located below eyes of a worker" (see claim 1) which is not positive structural limitation that does not further limit the claimed apparatus.

Allowable Subject Matter

3. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Minh Trinh whose telephone number is (571) 272-4569. The examiner can normally be reached on Monday -Thursday 8:00 am to 4:30 pm.
